

# FIS BLUE MODULAR BROADCAST SYSTEM

FIS Blue has created a revolutionary new system for broadcast fiber optic and copper patching. This convenient modular system utilizes a single 2U frame and up to eight 2U adapter plates/modules. This single frame allows users to load a variety of flat, angled, and loaded modules into the same rack. The modular Throw-Down Box takes the patching ability of the modular rack into the field, giving technicians the ability to adapt and connect cables on-the-fly. The complete offering of plates, modules and mounting options cover most fiber optic and many copper broadcast applications.
