

FIS BLUE PUMA ADAPTERS

Originally designed as a rugged and economical solution for field or studio applications that require the use of existing standard fiber cable with the SMPTE Hybrid HDTV Camera Connectors, the PUMA Adapter has grown into a full line of cable adapters. Use to interconnect equipment with standard ST or LC connectors in locations where non-standard connectors are the only ones in use.

Always available in male and female SMPTE versions, the PUMA is also now available in several other popular connector styles like Fischer, Delphi, OpticalCON/QSeal, Expanded Beam and others! See below for the full listing.

Not just for adapting to standard connector styles, the PUMA also comes in an Extender version for non-hermaphroditic daisy-chaining of optical cables, regardless of the connector style.

PRODUCT FEATURES AND BENEFITS

- Extremely durable and compact machined body
- Flat sides to prevent rolling
- Proudly Made In The USA
- Extender versions to daisy chain cables
- Recessed housing to protect fiber connectors
